Title: Business & Technology Application Technician  
Working Title: Application Developer  
Seeking: BS degree student, MS degree student  
Position Type: Temporary Full-time, limited duration  
Number available: 1  
Location: Raleigh  
Closing Date: No closing date

Position Summary:
This position will participate in the development and maintenance of applications for the Center for Geographic Information and Analysis (CGIA), an agency providing technical services in the field of geographic information systems (GIS). Work involves collaboration with CGIA staff and clients in documenting functional requirements and developing solutions for the maintenance and upgrade of existing applications hosted by CGIA.

This temporary position will be assigned to a variety of CGIA projects, providing exposure to different practical applications and uses of GIS and related technologies. Project tasks will include maintenance of existing thin-client applications, and extending the feature set of existing applications based prioritized functional requirements.

Requirements:
Two year degree or equivalent education in one of the following areas: GIS/GPS, geography, computer science, surveying and mapping, forestry, environmental science, or related field is preferred. Experience with ESRI software, specifically ArcGIS is preferred. Experience with Visual Basic, .net, PHP/MySQL is preferred.

Application Process:
All applicants will need to fill out a PD-107 for consideration. Applications can be found at link below:
